## 285 ORNAMENTAL DEPARTMENT

**Quantity Prices**—Ten trees or more of one variety furnished at prices considerably lower than those listed below. Ask for quantity quotations. Can also furnish smaller sizes in most varieties at reduced prices. Please note that we list the caliper or diameter of the Shade and Ornamental trees offered, as well as the height. Improperly grown trees often attain considerable height without proportionate diameter, and quotations listing only the height are often misleading.

## SHADE AND ORNAMENTAL TREES

We invite your inspection of the Shade and Ornamental trees growing in our nurseries, especially our stock of Norway Maple. We believe these to be the finest samples of this variety to be found in this section and the prices the most reasonable.

Note that we quote diameter as well as height

## EVERGREENS

**U. S. Department of Agriculture.** In transplanting, Evergreen trees are taken up with a ball of soil on the roots, which is securely covered with burlap. In planting, dig a hole where tree is to stand, place tree in hole just as received from the nursery, cut the string that holds the burlap in place and, if soil is unbroken, lift tree gently and remove all burlap. If soil is broken and likely to fall away from the roots, do not attempt to remove the burlap, but lay it out smooth underneath the tree. Fill in carefully with fine moist soil, which should be made firm enough by tramping to prevent roots being moved by the tree swaying in the wind.

The price of Evergreens is governed by color and form as well as size. It is only natural that selected specimens should be worth more than the average nursery run—hence the sliding scale of prices. All trees balled and burlapped.

## ROSE BUSHES

Our Roses are all hardy, two-year, field grown plants, mostly on their own roots and guaranteed true to name. For full description please refer to Descriptive Catalog.

**PLANTING INSTRUCTIONS**—In handling Rose Bushes, as well as all other nursery stock, be sure roots are not allowed to become dry while out of the ground. Dig hole large enough to receive roots in natural position and deep enough to leave branches just at the surface. Cover roots with good soil, using care to pack firmly around the roots, put in water enough to thoroughly dampen the soil and after water settles complete the filling, leaving top soil loose. Trim tops to within five or six inches of the surface. Irrigate sufficient to keep soil moist to the tips of the roots but not enough to maintain a sodden condition.

**PRICE, except as otherwise noted—40c each; \$2.25 per 6; \$4.00 per 12; \$15.00 per 50.**
